

# DISH yield results

preliminary

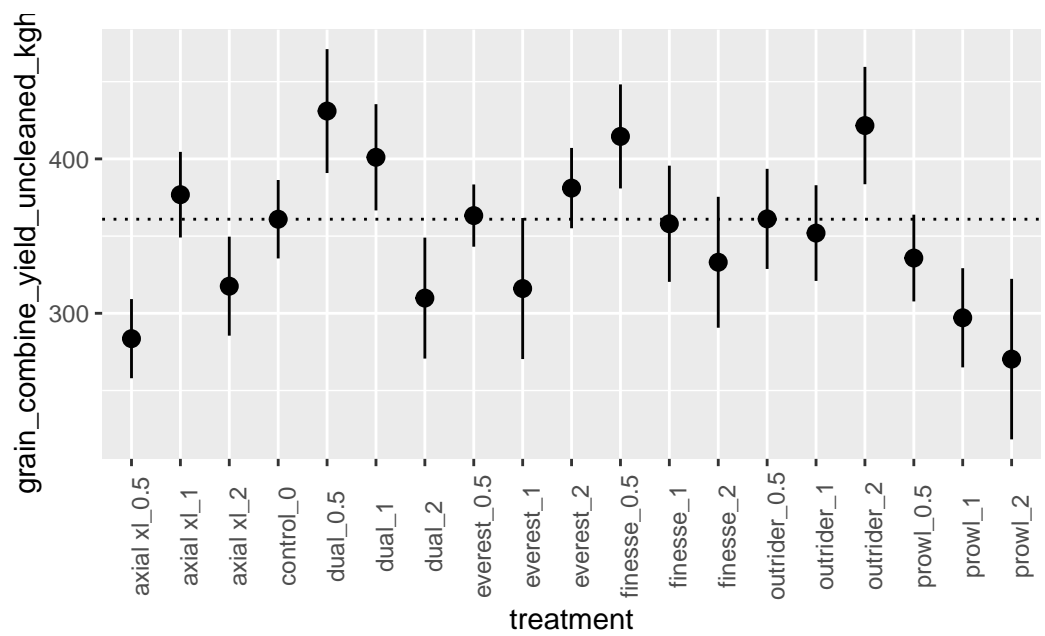

Sustainable Cropping Systems Lab UMN

2024-08-26

## Grain yield

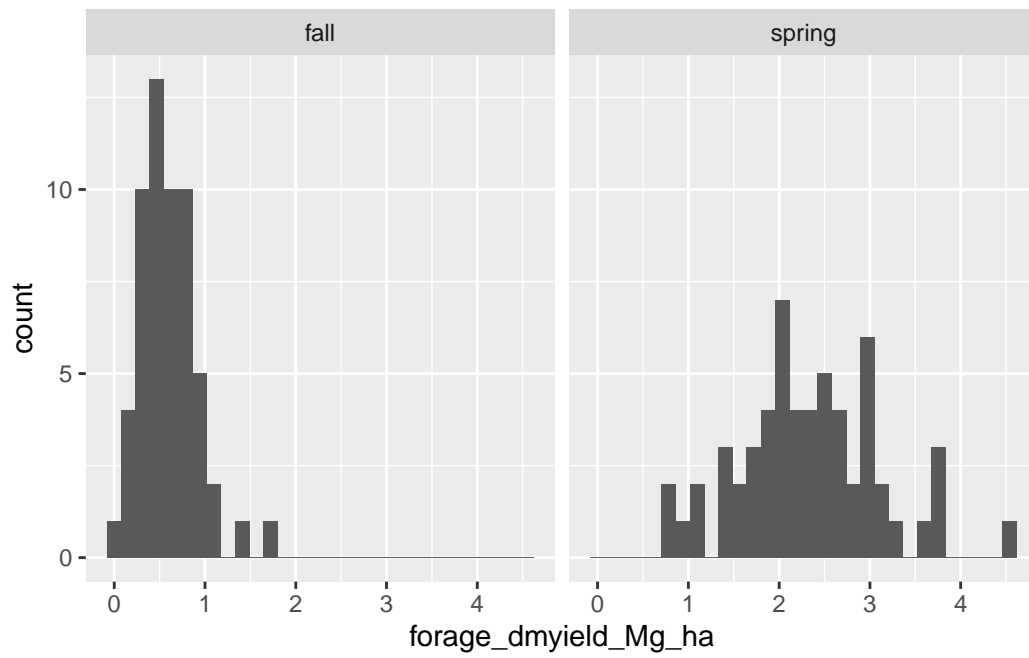

- The one datapoint below 100 kg ha was noted during combine harvest as having a exceptionally poor stand of kernza. This plot received a 2X rate of prowl.

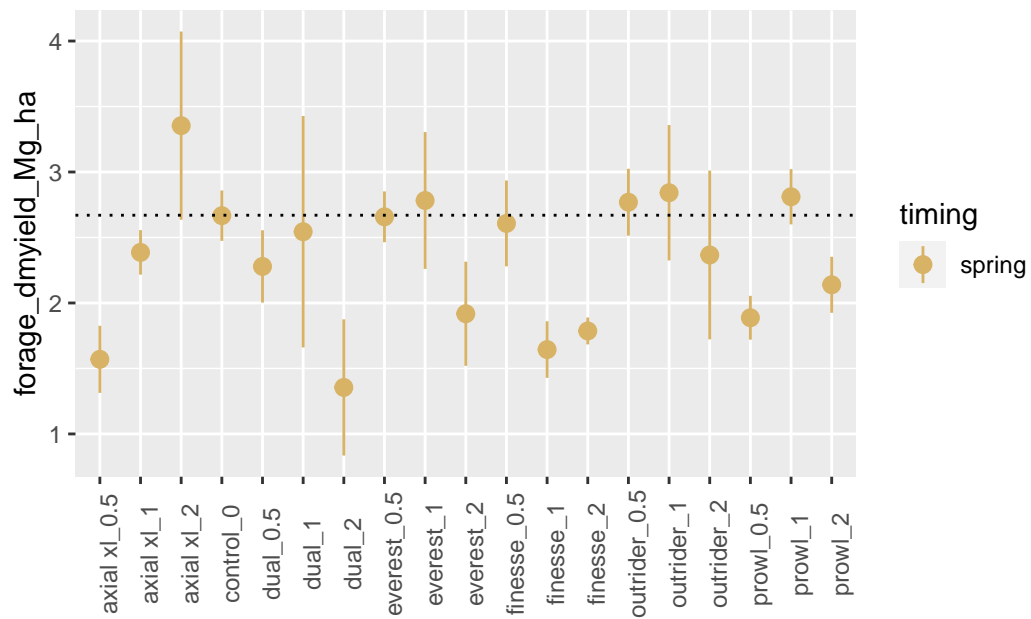

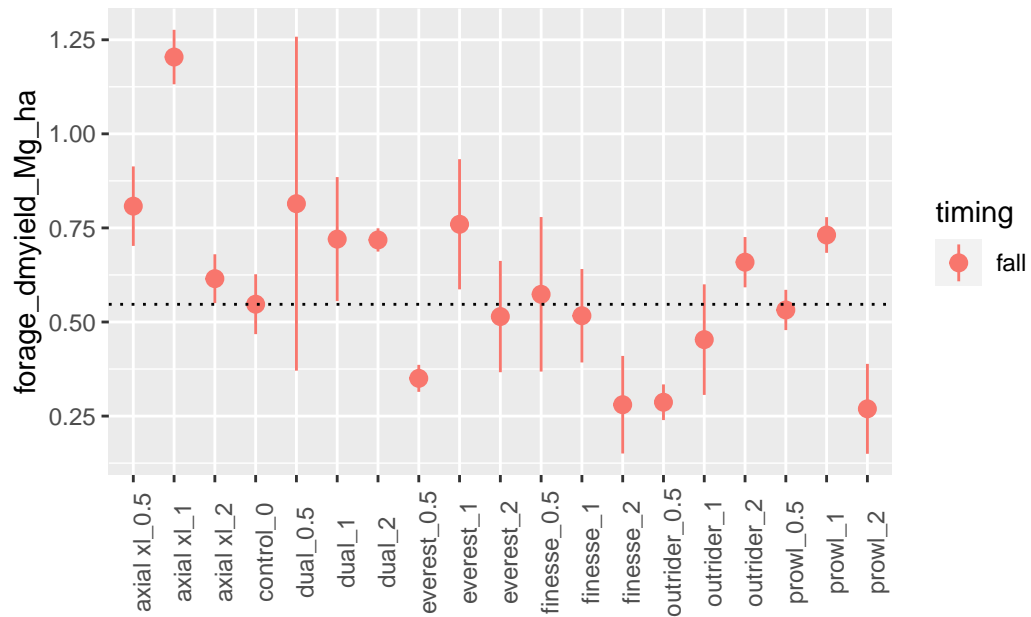

dotted line is control

## Forage yield

- fall sprayed harvested in early May, spring sprayed harvested in late May.

- positive effect from increasing rates of outrider for fall
- negative effect of increasing finesse in fall
- positive effect increasing axial in spring
