

Variety trial Roseau 2025

plot assignments

Jesse Bealsburg

2025-08-27

Treatments

we are seeding at 15 lbs A (regardless of germ tests)

```
# specs
# plot are 6x17ft in plot map but Donn wants me to weigh out for 5x15 ft

# 15 lbs
# 5*15 = 75 sq ft
# 15*454
#
# 6810/43560*75
# 12 grams per plot
# assuming high germ
#
# 15/43560*454*5*15
```

we are doing 12 grams of seed per packet except for borders which will be 15 grams per packet

there will be 12 entries

- MN entries

1. 1902
2. 2204
3. 1603
4. clearwater

5. 1903
 6. 2203
- TLI entries
1. 1102
 2. 801
 3. 1201
 4. 701
 5. 1101
 6. 1001

now we design

```
library(agricolae)

roseau_2025_entries <- c(
  "1902",
  "2204",
  "1603",
  "clearwater",
  "1903",
  "2203",
  "1102",
  "801",
  "1201",
  "701",
  "1101",
  "1001")

design.rcbd(
  trt = roseau_2025_entries,
  r=4,
  serie = 2,
  seed = 314,
  kinds = "Super-Duper",
  first = FALSE
) -> book

book$book -> plotplan
```

```
library(tidyverse)
# plotplan %>%
#   summary() %>%
#   print(n=100)
#   distinct()
#   glimpse()

# everything looks good
```

now into a plot plan people can read

```
# View(plotplan)
```

```
library(kableExtra)

plotplan %>%
  select(-block) %>%
  kable(format = "latex", booktabs = TRUE, longtable = TRUE,
        caption = "Plot assignments") %>%
  kable_styling(latex_options = c("repeat_header", "hold_position"))
```

Table 1: Plot assignments

plots	roseau_2025_entries
101	1902
102	2204
103	1603
104	clearwater
105	1903
106	2203
107	1102
108	801
109	1201
110	701
111	1101
112	1001
201	2204
202	1001
203	801

Table 1: Plot assignments (*continued*)

plots	roseau_2025_entries
204	1201
205	2203
206	clearwater
207	1902
208	1603
209	701
210	1102
211	1903
212	1101
301	1101
302	1102
303	1201
304	801
305	701
306	2203
307	1603
308	2204
309	1903
